Instructions regarding reporting with web form

We would like to clarify the instructions regarding reporting with web form. The reporting form is primarily designed for submitting smaller reports and is suitable for reports containing up to 500 rows. Handling larger reports using the form is not recommended. Sending large files through the form can cause significant constraints on the server and slow down the system's performance.

We also recommend that form reporters verify that the information reported on the forms in the new eReg reporting system corresponds to the information reported in the previous DCS2 reporting system. Reports submitted via the DCS service can be saved as CSV files.

Questions related to the reform of the Reporting System
